Manufacturing Engineering Consulting

Process optimization for machining, metal stamping, die casting, and plastic molding

Design review for manufacturing effectiveness

Pragmatic physical reality based analysis

Interface with design, manufacturing, and quality personnel

Special Services for Maintenance and Reliability Functions

Inspection of worn out or underperforming equipment specifically with intention to suggest practical means of increasing service life with optimized maintenance schedule

Systems Thinking Applications and Training

Systems thinking makes the most effective use of resources already present. This includes review of product design, quality system and acceptance criteria, and continuous improvement for increased customer satisfaction.

Experienced Mechanical Specialist

Multi-level experience from formal tool and die maker apprenticeship, followed by decades of experience making tooling, performing complex metrology inspections, salvaging scrap for normal in service use, give Kwiek Tech knowledge you can use to quickly resolve longstanding issues which reduce profits.

Sound knowledge of IT systems, quoting, estimating, and operations management experience round out the background that allows Kwiek Tech to provide effective solutions to a wide range of engineering and manufacturing issues.
